Java Platforms

Runs Bangalore JUG (meetup.com/BangaloreOpenJUG/)

Agenda

- Preventive steps before Production

- Different logging options

- General issues in Production

- Fixing vs Resolving

- Give back to Java Team

Preventive steps before Production

- Fed-up before Production

- A man of Consequences

- Clash of Coders

- Dependencies on other modules

- Early bird Access

Common Mistakes in Development

- I like "Coding" – No Use of existing Libraries

- Its my code, no one can analyze it better than me.

- I am 10 year experienced programmer and I will use what came in the language at my time.

- The base product is awesome and can't be buggy.

- I should not understand those part which Language do it for me.

Examples for You

- I want to write an intersection code for my file comparison :-

```
for (T t : list1) { if(list2.contains(t)) { list.add(t); } }
```

```
c1.retainAll(c2)
```

- Educate yourself, follow what interests you

```
Pair<String, Integer> p1 = new OrderedPair<String, Integer>("Even", 8);
```

```
OrderedPair<String, Integer> p1 = new OrderedPair<>("Even", 8);
```

Rationale Judgment

- Trivial Problems are trivial if solved …

    - If it's a memory leak, analyze and fix it. Its simple.

    - Fixing an issue in production costs 25 times more than development phase (and better sleep as well)

Be aware of …

- Be aware of impact of these codes

    - Concurrent code

    - Resource allocation and de-allocation

    - Native code, if any

    - Hot codes

    - IsNullable codes

    - Exceptions

VM arg for Postmortem

- -XX:+UseGCLogFileRotation -XX:NumberOfGCLogFiles=10 -XX:GCLogFileSize=100M

  - Makes GC analysis easier and protect disk.

- -XX:+HeapDumpOnOutOfMemoryError -XX:HeapDumpPath=<path to dump>`date`.hprof

  - Oh OOM, how ?

- -XX:+PrintGCDateStamps -verbose:gc -XX:+PrintGCDetails -Xloggc:"<path to log>"

  - Good to log GC details.

- -client, -server, -d64, UseCompressedOops ??

  - Leave it

- Type of GC – Select as business demands. Learn how to do OR Pay Us !
